Internet-Based Medical Appointment Booking System

Course: Software Engineering Lab / Internet Engineering

Project Developer: Soheil Ghorbani

Project Type: Web-Based Application

Project Vision :

The Internet-Based Medical Appointment Booking System is a web application designed to simplify the process of booking medical appointments. The system allows patients to view doctors' information, check available appointment times, and book or cancel appointments online.

The application also provides an administrative interface for managing doctors, appointment schedules, and patient bookings. The main goal of this project is to reduce the time required to schedule appointments, minimize scheduling conflicts, and improve accessibility for patients.

The system will provide a simple, user-friendly interface that can be accessed through a web browser. This project focuses on the essential features required for a basic online medical appointment booking service.

Target Audience :

The target audience of this system includes the following groups:

1. Patients: People who want to find doctors, view available appointment times, and book or cancel appointments online.

2. Doctors: Medical professionals who need to view their appointment schedules and manage their availability.

3. System Administrator: The person responsible for managing doctor information, user accounts, and appointment records.

The system is intended for small medical clinics and individual medical offices that need a simple and efficient way to manage appointments.

Core Features: User Stories

Patient Features

US-01: Patient Registration

As a patient, I want to create an account, so that I can use the appointment booking system.

US-02: Patient Login

As a registered patient, I want to log in securely, so that I can access my account.

US-03: View Doctors

As a patient, I want to view a list of available doctors, so that I can choose a suitable doctor.

US-04: Search for Doctors

As a patient, I want to search for doctors by name or medical specialty, so that I can find the doctor I need.

US-05: View Doctor Details

As a patient, I want to view a doctor's profile and working hours, so that I can make an informed appointment choice.

US-06: View Available Appointments

As a patient, I want to see available appointment dates and times, so that I can select a convenient time.

US-07: Book an Appointment

As a patient, I want to book an available appointment, so that I can schedule a visit with a doctor.

US-08: Prevent Duplicate Bookings

As a patient, I want the system to prevent booking an already reserved time slot, so that my appointment does not conflict with another patient's appointment.

US-09: View My Appointments

As a patient, I want to view my upcoming and previous appointments, so that I can manage my visits.

US-10: Cancel an Appointment

As a patient, I want to cancel an appointment, so that I can release the time slot if I cannot attend.

Doctor Features

US-11: View Appointment Schedule

As a doctor, I want to view my appointment schedule, so that I can see the patients scheduled for each day.

US-12: Manage Availability

As a doctor, I want to manage my available working hours, so that patients can book appointments only during available times.

Administrator Features

US-13: Manage Doctor Information

As an administrator, I want to add, edit, and remove doctor information, so that the list of doctors remains up to date.

US-14: Manage Appointments

As an administrator, I want to view and manage appointment records, so that I can help resolve scheduling problems.

US-15: Manage User Accounts

As an administrator, I want to view and manage user accounts, so that I can maintain the proper operation of the system.
